**Annotation:** teachers in the article education and training in order to modernize the organization of the process of foreign map of perception in the course of lessons on the basis of experience and from it in education thinking about ways to use it.

**Keywords:** foreign technology, intellect card, perception map, Blum taxonomy, conversational dialogue.

### **Introduction**

Republic of Uzbekistan social and Economic today and cultural the prospect of development setting the world to occupy a worthy place in the ranks of the countries of the community, implementation of large-scale reforms on the road to aspiration going by the way. Developed world their countries learning experiences, local conditions, economic and intellect society taking into account resources implementation of radical reforms in all spheres of life the increase is new achievement achieve provides. Set out in the training as in different areas the ongoing international cooperation is effective although, however, to strengthen national independence in all respects, achieved enrichment of achievements, available before training elimination of shortcomings is individual from members of society it requires dedication, labor and determination. Pedagogical activity in higher educational institutions Organization of teaching-learning procession of professors and teachers modernization of production, organized in accordance with the purpose advanced foreign experiences that will lay the foundation for mastering, applying them in practice and various options particular importance of development competence development will earn. Taking into account the above tasks, professor-

Teachers on the content of education in the process of philological education advanced Foreign Language Teaching in related Uzbek language and literature must be able to apply technologies. Variety in philological education foreign technologies

Reasonable application to obtain, lesson in addition to ensuring efficiency in students

Analysis on the toxicity of Blum to the understanding of the essence of the topic teaches to do. In particular, during the lesson "intellect card" ("mind map") that is, the use of "perception map" is given understanding on-the conduct of presentations, decision-making, own plan your time, remember a large amount of information storage, intelligent attacks, self-analysis,

develop complex projects output, independent education, an excellent tool in developing and solving similar tasks

Will serve as. Intellect-to apply cards in lessons related preliminary experiments performed by Tony byuzen carried. The T.Intelligence in the work "Superthinking" byuzen-of the card defining the details:

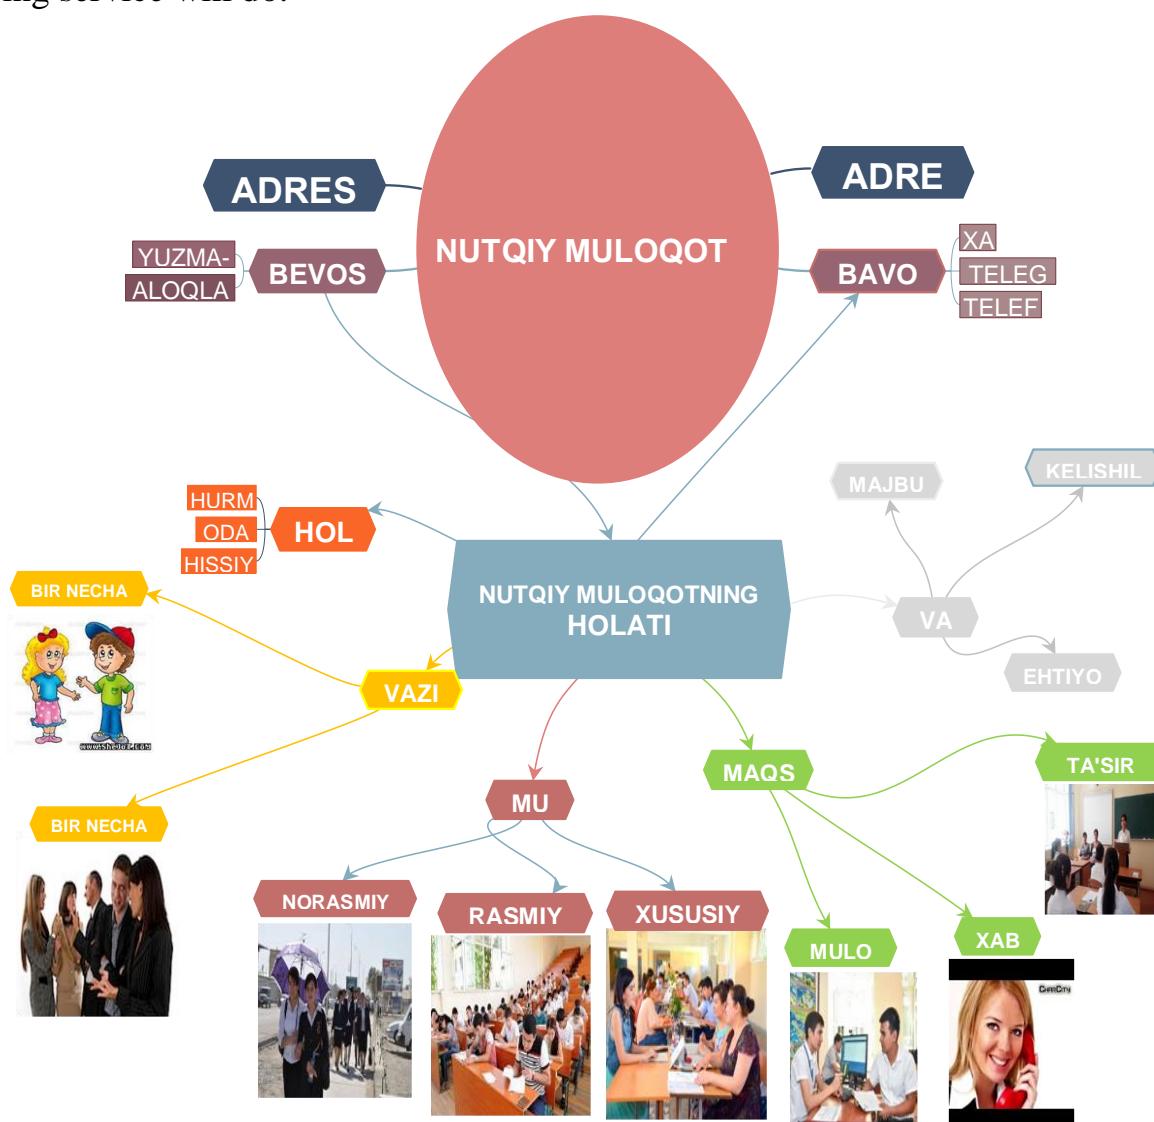

- 1) the main idea, problem or word it is placed in the center (it is a picture scale or a word in appearance);
- 2) pictures should express a central idea;
- 3) each network must be marked with a different color;
- 4) card in preparation absolutely color stone cutter or from markers will be used;
- 5) basic networks a basic understanding of the center it communicates with small networks to the main networks connects;
- 6) only one key word is written to each network;
- 7) intelligence-from associative concepts in the formation of the card use to the goal appropriate.

Intellect-from cards in creating clear and understandable outlines of lectures, in achieving maximum efficiency in book/textbook reading, synopsis, it can be used in writing course projects, diploma work. Textbooks, books, articles within the framework of Education; hearing through intellect-cards in the design of lectures can apply. Most often, you read the textbook, as you understand, but one 3-4 weeks after reading, when the exams are over, all it will go away from your memory. To recall the whole information It is necessary to re-read the 200-300-page textbook.

That's exactly what gives us this opportunity-an intellect card. Intellect khomaki ideas on the subject area read on the card it is possible to draw and reflect. In the second stage, the reflection on the paper will run. new method: initially intellect article plan- write khomaki in the form of a card, then on this khomaki mold the remaining text can be inserted. The purpose of this study is: Analysis/understanding.

Sometimes you read a page from the text, but nothing you do not understand. You can read another morataba... you will not understand again. of the author thoughts very complex, very confusing... in an inseparable sequence of thoughts in memory there will be a need to save. The use of the card makes it possible to: a) Author good Association of thoughts; B) logical allowing the author knowledge of errors and inconsistencies; v) better the text to analyze; G) to fill in their thoughts; Sometimes it is required to remember some kind of Information (long term to memory). This is also helped by intellect-cards, namely not the page of the text, but 100 keywords are remembered. Several times so that the card can be stored in long-term memory it is necessary to repeat. A good speaker is prepared for output. That is he reads books, articles... prepares copies from them, this is the intellect of these things, so as not to get confused in the diversity- preparation in the form of Cards is effective.

From experience it is known that the distribution in the form of text no one reads the material. Scheme of a distributing material if in appearance, then at least look at it. 20 pages where required, sometimes 20 pages with 1 keyword are enough will be. And this 1 page is from the usual 20-page distribution material according to more information faster commemorative stone creates. Intellect-maps in a state of debate based helps to make decisions: "Buy - Buy to die", "to go - change the case of" not to go " do not change", etc., Intellect-maps all the information on one sheet allows you to collect a peek. He or she decides it does not overlook its good and negative sides. Associative thinking FA activation in traditional analysis getting attention to the important omens left on the sidelines allows you to. For example, in the direction of philological education "Sosiolinguistics", "Culture of speech", "reading", " culture of speech and the art of reading" and in such subjects the subject or understanding of "Speech Communication will be taught. Intellect-maps the next moment on the sheet all data is a tool that allows you to throw a girl, lesson efficiency increasing service will do.
