

THE TASTE OF EVALUATION IS THE POWER OF THE SPIRIT

I. Nosirov

"Department of language teaching" Associate Professor, Candidate of Philological Sciences

Sirdarya Regional Center For Retraining And Advanced Training Of Public Education Staff

Annotation

While being the subject of endless research on literacy scale assessment methodology, it is in fact an intensive, constantly evolving process. Identifying and implementing the most effective ways to enrich and evaluate this process with new non-traditional methods should be based solely on the erudite strength, knowledge, and experience of the teacher. Literacy is the result of continuous knowledge implication, explanation, interpretation, referral, application, and final evaluation. Another factor is the stable condition of the home environment, parental maturity, quality, especially a sufficiently healthy environment and the created situation is one of the important conditions of enlightenment education in the development of the student to achieve a positive result in education.

In this article, it has been scientifically proven that a positive assessment given to a student by a teacher and its amount will ensure mental stability, aspiration, self-confidence and physical perfection in the student.

Keywords: Literacy, assessment, intensive, continuing education, enlightenment, upbringing, mental stability.

The signing of the State Program "Action Strategy for the five priority areas of development of the Republic of Uzbekistan in 2017-2021" by President Shavkat Mirziyoyev and the organization of education in secondary and higher education in the country on the basis of new innovative technologies directly affects the cultural, educational, economic As a prerequisite for the growth of the country's economic, cultural, educational and social potential, as well as to raise the literacy rating in continuing education to the parameters of the World Education Standard. enrichment of the industry with advanced innovative ideas, application of new technological modules in education, their effective use, ultimately meeting the requirements of the time, truly competitive in the labor market, in demand, mature scientists and specialists It is repeatedly emphasized that in the preparation and development of all sectors, modern science, enlightenment and education are noted as the defining star of development. After all, in the history of our Motherland, scientists, scholars, poets, giraffes, astrologers, engineers, historians and artists, who consider science and education as their professional duty and have made a great contribution to world science and civilization, have been brought up and brought up in the land where we breathe. they bequeathed to us their literary and enlightenment correspondence. It is the authoritative teacher, the educational method and teaching used by the coaches that still have a place and status in the acquisition of knowledge and skills of our youth in the educational process. As a result of the rapid growth of development, the introduction of non-traditional, interactive methods in the education system and the professionalism of experienced educators, professors, public educators and the people involved in this field, who make an effective contribution to the implementation of this method, method, direction in the educational process. The good deeds of the authorities in equipping schools with modern teaching aids, as well as the fruitful practical services provided in the upbringing and education of the next harmoniously developed generation are worthy of respect. The fruit of devotion is in fact devotion to the Motherland and boundless love. The fruit of devotion is the training and education of intellectual personnel. The result is recognition. At the beginning of the Decree "On awarding a group of outstanding employees of the education system on the occasion of

Teachers 'and Coaches' Day" signed by the President on September 27, 2019, President Shavkat Miromonovich said: "Development of the education system, successful implementation of reforms in the field, teaching the basics of science and modern professions ... educating them in the spirit of love for the motherland, devotion to the ideas of independence, the formation of a physically and spiritually harmonious generation ... and improving education in our country on the basis of international standards, advanced foreign experience in the educational process, the widespread introduction of innovative pedagogical and information and communication technologies, the application of scientific achievements in practice, the upbringing of a healthy generation ... "imposes a greater responsibility on professionals.

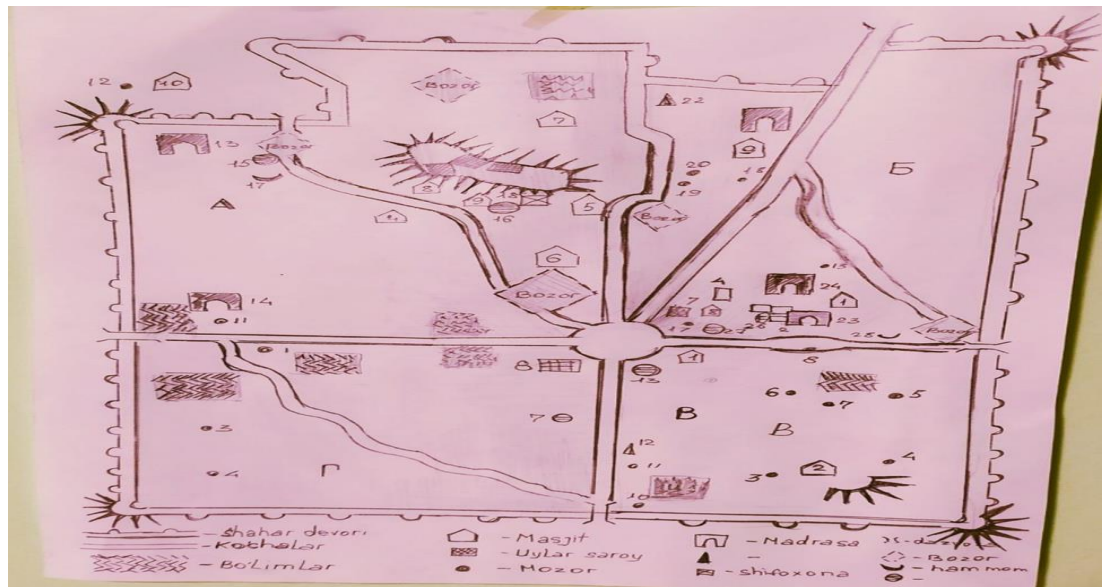

In fact, it is clear from the content of the quotations that the comprehensive reforms and fundamental projects in continuing education in our country are organized on a scientific basis. As a proof, participation in the PISA, PIRLS international assessment survey conducted by the Organization for Economic Cooperation and Development of the Republic of Uzbekistan on the basis of the project adopted by the VM on July 13, 2018, is very relevant in determining the quality of continuing education, the solution of which is important in determining educational prospects. In order to ensure the successful participation of Uzbekistan in the PISA, PIRLS international assessment program in 2021, to achieve the desired results, and to ensure the recognition of Uzbekistan's educational achievements in the world community, a Roadmap was developed. The origin and application are remarkable.

In order to successfully implement the international program in continuing education, in accordance with the resolution of the Ministry of Education and Science on December 8, 2018 "On measures to organize international research in the field of education quality assessment in public education" under the State Inspectorate for Education Quality Control under the Ministry of Education The establishment of the National Center for Research is a serious reality aimed at providing a legal framework for this sector.

The program, which is being introduced to determine the level of knowledge achieved by students at the initial stage, is an important event of national importance. Because the first cycle of continuing education is a very serious process in terms of content, the knowledge acquired by the student in the primary school, the practical skills acquired are the main basis for mastering the subject at a later stage. Demonstration of personality traits in the student, his appearance, becoming an independent active student, the formation of a unique analytical view of behavior, behavior, environment, events, the development of thinking, feeling, cognitive abilities directly and indirectly in the process of primary education knowledge depends on skill. Healthy thinking, emotional observation, ability is formed. To bring a normal child to the level of a reader, to read and understand the text expressively, to analyze, to draw appropriate conclusions from it, to enjoy aesthetics, to compose oral and written narratives, to express qualities, to reach the level of literally aspiring perfectionist, intelligent, white -Education at the level of intellect-personality, which can distinguish the black, requires from the primary school teacher unlimited professional skills, hard work, patience. If a coach has a scientific qualification that goes through a skill school, know that the trainees can be considered to have achieved the goal we wanted. But what should be the tools used in the inter-educational distance to achieve this quality and level? In our opinion, it is necessary to provide this educational process, first of all, with all the educational tools related to education, to create an attractive and healthy environment for the student to create a great desire to learn. The classroom should have all the amenities, fully equipped in accordance with the requirements of the STS, the number of students should not exceed the established norm, the necessary literature, teaching aids, visual aids, educational stands, films of various didactic content, short stories and fairy tales, the youth of our scholars should be filled with prose and poetic works of art written about. The student must be able to read the text fluently, expressively, and have developed sufficient skills from the rules of speech, spelling, such as phonetic, grammatical rules: pause, tact, syllable,

stress. The teacher should hold the concept of time firmly in his or her hand during the lesson and not lose it. Otherwise, the goal of the training will be missed. The result decreases.

Although the views expressed by us are in the form of generalizations, they are personal considerations in terms of necessity. In our opinion, in order to fully implement this project in secondary education, it is necessary to first introduce an information system on the ability of each student to master. This is the purpose and goal of the project. It should be noted that the positive assessment of the student by the teacher and its amount provides the student with mental stability, aspiration, self-confidence and physical perfection. It is no secret that Abu Hamid Muhammad al-Ghazali, in his book *Ihyou ulumiddin*, said that there is pleasure in knowledge and enlightenment. Even an insignificant amount of knowledge and enlightenment satisfies a person ... Science is the most characteristic of the divine qualities and the highest limit of perfection. That is why human nature enjoys being praised with intelligence and knowledge. Because when he hears the praise, he feels the perfection of his nature and knowledge, so he is amazed and enjoys himself. ” The scholar's description is evidence of the reader's appreciation, taste, and delight. So, the taste and power of the price gives the reader wings, inspires. The assessment system is a very delicate psychological process, with the teacher taking control of the management system in this way, increasing the level of demand and achieving the intended goal. The essence of the project is to what extent did the student gain knowledge after completing primary general education? is to have a clear database on the question. After all, at the next stage, the student must be able to read and understand the text fluently, be able to express the content of the topic fluently in writing and orally, and be ready to draw clear conclusions from the observed. While being the subject of endless research on literacy scale assessment methodology, it is in fact an intensive, constantly evolving process. Identifying and implementing the most effective ways to enrich and evaluate this process with new non-traditional methods should be based solely on the erudite strength, knowledge, and experience of the teacher. Literacy is the result of continuous knowledge imparting, explaining, explaining, referring, applying, and ultimately evaluating. Another factor is the stable condition of the home environment, parental maturity, quality, especially a sufficiently healthy environment and the created situation is one of the important conditions of educational upbringing in the development of the student to achieve a positive result in education. We consider it expedient to refer to Mazi as proof of our point. For example, when we start to acquaint students with the works of Hazrat Alisher Navoi, first of all, in the current educational process, it is expedient to implement pedagogical educational solutions through demonstration, role, conversation, innovative methods. In particular, the role of didactic education in the history of our national pedagogy with a positive impact, which is still used in practice, beyond description. At the same time, it is the culmination of an educational method that is constantly recognized in modern pedagogical science and embodies all methods. In particular, in the works created by Alisher Navoi, the quality and glorification of education, the interpretation of a perfect human upbringing come to the fore. In the introductory part of the lesson, first of all, dozens of schools, madrasas, hospitals, anchors, palaces, to acquaint students with the information about the construction of mosques, khanaqahs, baths and a number of buildings, the creation of a peaceful, calm and secure environment in the country, the prosperity of science, art and culture, the rise of the capital to the level of dorussaltana causes a sense of pride and arrogance. A few minutes of historical correspondence to prove our point, as well as the introduction of information about the city of Herat in the work of the archeologist NN Tumanovich on the history of Herat, will be a priority for the expression of the next stage of the topic.

In order to connect the subject with reality, we turn to the statement of the second scene in Majlis un-nafois: “Including: Mawlana Sharafiddin Ali Yazdiydu — Mawlana's mastery is perfect in the eyes of the world. In the mischief of Shah Rukh Sultan, the poor man's parents fled from Khurasan with the help of the cashier, and on their way to Iraq, Taftgakim, the teacher of Mawlana, arrived at midnight. The alliance was at the door of the khan's house, and in the morning, when the game was over, the children of that church came into the room to play, and I knew the poor man, I was about six years old, atfoldin wished one.

I managed to get a poor alar sori. Everyone asked and I answered. They smiled and praised me, asked me if I went to school. I said: I went. They said: How far have you studied? I said, "Until Surah Tabarak." They said, "When we prayed for this congregation, you came and became acquainted with us. They blessed you with their blessings as the son of the blessing for you." After the arrival of the poor man's parents and the needy in the service of Mawlana, the poor man became aware of "what a man they are." Running with example and wisdom, this tablet has no educational weight, no measure of its power, no limit, and Alisher Navoi proudly finished this prayer with a lifetime of pleasure. In our opinion, the effective use of various visual, role-playing episodic scenes or multimedia, which are embedded in the educational reality of the student, is an exemplary educational method in the educational process. The third enlightening advice is for 12-year-old Alisher in the circle of poets:

Оразим ёпқоч кўзимдин сочилу ҳар лаҳза ёш,
Бўйлаким пайдо бўлур юлдуз, ниҳон бўлгач қуёш.

It is noteworthy that when reading the verse, the students were surprised to learn that Mawlana Lutfi had exchanged his twelve thousand poems in Turkish and Persian for these two verses if Alisher had agreed. Venn diagram, interdisciplinary connection, fish skeleton, insert, T-scheme, etc. the use of methods serves to make the session more interesting and understandable. This requires great skill on the part of the literature teacher.

In order to develop students' skills of independent learning, special attention should be paid to independent work on various sources related to the topic, extensive use of Internet information, independent work on them, conversations, practical training. It should be noted that using the above methods, students' knowledge is activated during the lesson, they form new concepts, skills and abilities on the topic.

Based on the above-mentioned facts, it should be noted that in the process of education, the development of the student's personality and the demonstration of positive qualities, perfect qualities are necessary only for the sweet words and kindness of the teacher and praise. Vassal.
