

INCREASING THE EFFECTIVENESS OF MOTHER TONGUE LESSONS IN AN INNOVATIVE EDUCATION

Mokhigul Abuvohidovna Jumayeva

A Teacher of Primary Education department,

Navoi State Pedagogical Institute

Abstract – The more independent a person's thinking is, the more enterprising he will be. The freer a person thinks, the more inquisitive and creative he becomes. When a developing person gets rid of the authority of adults in the family, teachers at school, and acts according to his mental and physical abilities, the child develops a sense of responsibility for his actions. He will have his own opinion. The thinker always bases his views and defends them when necessary. Therefore, in our country, special attention is paid to the education of a harmoniously developed generation of independent thinkers.

Key words: person's thinking, mental and physical abilities, education, independent thinkers.

Introduction

Bringing up our young generation, who are our future, is one of the most important issues for our people since ancient times. We can learn this from the scientific works of our medieval scholars. Great thinkers such as Abu Ali ibn Sino, Amir Temur, Alisher Navoi, Abu Raihan Beruni, Al Khorezmi, Abdullah Avloni left a huge rich heritage in the treasury of world science and culture with their teachings in various fields of science. As our great ancestor Alisher Navoi said, as long as everyone has a school, they should study it perfectly and pass it on to future generations. School owners have long been revered. Respect for them has grown in our country as well.

Main body

Today, the independent Republic of Uzbekistan is in great demand for knowledgeable, independent thinkers, creative seekers, highly qualified, cultured, creative, skilled craftsmen.

In particular, the opening of new types of educational institutions (primary school, academic lyceums) and the establishment in them of educational work by highly qualified specialists based on advanced educational technologies: a leader in the developed countries of the world. This is evidenced by the fact that talented young people are being sent to educational institutions.

The first President of independent Uzbekistan I.A. Karimov said in his speech at the first session of the High Secretariat of the Republic of Uzbekistan that the role of youth in our society was highly valued. In the primary school, teachers have the opportunity to develop their aptitude for school, abilities, knowledge and skills, to have 6 professions in their chosen field, that is, to have a good profession is the most important thing for a person. It is a great adornment and will be of great benefit to him throughout his life". Also, the implementation of the idea of national awakening of the youth, the stability of our state in the future depends on how our youth is formed. He called for a radical reform of the education system, a complete elimination of old ideological views, focusing on primary education, including: A whole system of pedagogical technical schools and educational institutions was established, which mainly trained teachers to teach students in grades 1-4. However, the simple logic requires that the most mature and experienced coaches be attached to the primary school, where the child's worldview, taste and potential are formed. For this reason, the process of training primary school students to become qualified, modern staff continues.

In the primary education system, teachers with higher education are required to teach, and at the same time, the use of innovative pedagogical technologies in primary school lessons is a problem to increase the effectiveness of teaching, which contributes to the organization of the educational process, relative and implementation at present prof. R.A.Mavlonova, prof. N.N.Azizxadjayeva, prof. O.K. Tolipov and J.G. Yuldashev are conducting scientific research. Associate professors Sh. Yuldasheva and H. Gulomova are working on the creation of textbooks.

Conclusion

Innovative pedagogy is now known as an informal science, but it is a rapidly evolving system of knowledge that attracts the attention of experts around the world. Recognizing its educational value, the pedagogical community is therefore critical of existing traditional pedagogy. There are serious opinions about this new science, which is being formed and developed today. Its main task is to reorganize and master the theory of the entire educational system on the basis of innovation. Innovative pedagogy - the dominant theory is the basis for solving theoretical and practical problems.
