ANNOTATION

The article discusses the fact that today only a truly enlightened person can selflessly fight for the realization of human value, national values, in a word, his own, for living in a free and free society, for a worthy place in the world community of our independent state.

Keywords : " New Uzbekistan " , national values, spirituality and enlightenment, globalization, " mass culture " , " ideological war " .

Educating students in the spirit of national values in the process of globalization about thoughts we are today in the day new Uzbekistan set up in reaching national values based on brought up generation place is important . After all, New Uzbekistan _ national values based on brought up perfect generation set up is enough Honorable President Sh. M. Mirziyoyev by this about one series affairs done is increasing . That's it reasonable politics because of our people own _ recognize , own family tree perception is doing : based on the idea that "New Uzbekistan starts from the school threshold", unprecedented attention is being paid to the fundamental reform of the national education system. A lot of work is being done to develop the fields of science, culture and art, port literature, increase the efficiency of spiritual and educational work, and realize the talents and abilities of young people,

especially our girls. All this serves to create the foundations of the Third Renaissance in our country - a new era of our national development ¹.

The generation raised on the basis of mastering our heritage rich in national values cares for the development of our country. The First President of the Republic of Uzbekistan, IA Karimov, pays great attention to issues such as educating young people in the spirit of loyalty to the Motherland, high morals, spirituality and enlightenment, conscientious attitude to work, and said, "For the well-rounded spiritual world of our children, their education "We need to constantly care and fight for them to be spiritually and morally mature and physically healthy," he said.

In fact, today, only a truly enlightened person can realize human value, national values, in a word, his identity, live in a free and liberated society, fight selflessly for our independent state to take its rightful place in the world community. possible

The methods of conducting "ideological war" used by many countries today are actually clearly expressed in the manuals of Sun Tzuzi, a Chinese philosopher and military leader who lived in the 6th century BC.

1. Make a mess of all the good things in your enemy's country.
2. Involve prominent figures of the enemy in criminal activities.
3. Defeat enemy leaders and, when the time comes, publicly shame them.
4. For this purpose, use cooperation with the most vile and vile people.
5. Create conflict and conflict among the citizens of a country that is hostile to you.
6. Pit the young against the old.
7. Support the work of the government by all means.
8. Prevent by all means the normal provision of the enemy's weapons and the maintenance of order in them.
9. Keep the enemy army busy with songs and music.
10. Do all you can to devalue the traditions of your enemies and make them lose faith in their gods.
11. Send frivolous women to promote moral corruption.
12. Be generous with offers and gifts for buying information and partners.
13. Do not spare money or promises in general, because they give great results.

As a practical manifestation of these ideas, the forms of ideological attacks such as exporting foreign ideas and false democracy, promoting obscenity as culture in other countries , and showing violence and violence as art, are increasing day by day. it's not a secret. Young people are the target of these attacks, and the ideological threat to our society is increasing. For this reason, it is necessary to establish the principles of a healthy lifestyle among young people, to protect them from drugs, immorality, all kinds of harmful influences coming from the outside, threats and dangers under the guise of "mass culture". .

At the moment, the destructive forces that forcefully promote the "single standard" of democracy, freedom, and openness in the world are trying to use different ways to influence people's minds. "Popular culture" serves to subjugate a very important function - human spirituality. And the "culture" that "z" is doing is based on the free use of everyone's freedom, which does not restrict human rights. At this point, the following lines of Alisher Navoi come to mind:

¹ We will firmly continue the path of democratic reforms based on the development strategy of the new Uzbekistan <https://president.uz/uz/> 06.11.2021

Eating what you put in front of you is the work of an animal.

So what comes to his mouth is the work of a fool.

If we analyze these words in depth, the real purpose behind the mask of "mass culture" that gives freedom to everything becomes clear. In fact, vices such as immorality, promiscuity, violence and depravity that come under the shadow of "popular culture" do not correspond to the national culture or universal values of any people in the world. In particular, the legacy left by our great ancestors, Imam Bukhari, Burhoniddin Marginani, Ahmad on Farbuony Mirzo Ulugbek and many others, who were born and raised in our land and made a great contribution to world culture and civilization, has lost its relevance even today. no. gone _ _

Most of the population of our country is made up of young people. Therefore, the ability to resist the threat of "mass culture" is becoming more and more important. The first President Islam Karimov touched upon this issue in his work "High Spirituality - Invincible Power" and said that considering immorality as culture and, on the contrary, disregarding original spiritual values and looking at them as old fashioned things are not good for today's development, human life, family. especially emphasizes that it poses a great danger to the sanctity and education of young people. Drawing a correct conclusion from these points, we need to pay special attention to the formation of ideological immunity in our youth today. Ideological immunity is related to a person's will and outlook, and in order for a person's will and outlook to be strong, he must have strong faith in life, the future, and his own strength and capabilities. In particular, in the fight against "Popular culture", we must pay special attention to the following:

- first of all, to strengthen the faith of our youth, to strengthen their will, to educate them to become well-rounded people who have their own independent opinion;
- to establish in the thinking of young people the virtue of not forgetting their identity, preserving and respecting the sacred values of their ancestors;
- we need to make them live with pride and pride that I am an Uzbek child.

The analysis of social science programs in higher education institutions shows that in their content, spiritual and moral education of young people based on national values is given a lot of space. Therefore, the establishment of education and upbringing separated from national values leads to alienating the youth from the heritage of their ancestors.

Today's in the day Our continuously developing national spirituality, national culture, and national values play an important role in accelerating the development of society, educating and perfecting a person in a spiritual and moral sense . The high culture and scientific discoveries created by our great ancestors are of great importance in the formation and development of the outlook of a person, including the young generation, which is the highest value of our society.

Educating young people in the spirit of national values serves to increase the spiritual wealth of the young generation. Loyalty to the motherland and the nation is also a sign of civilization, spiritual maturity, and moral purity.

A person cannot be perfect without being physically strong, spiritually and morally mature.

According to Abdulla Awlani's work "Turkish Gulistan and Ethics", "a healthy and strong part of the body is the most necessary thing for a person... Enjoying our life depends on the healthy part of our body." We were commanded to preserve, therefore, we should avoid rotting our body with bad habits that are against all health ².

² Abdulla Avloni "Turkish Gulistan and morality".-T.: "Teacher", 1992, p. 17

One of the important aspects of educating young people in the spirit of national values is the upbringing of national consciousness and national pride. The fact that our national consciousness and national pride are growing day by day does not mean that there are no problems in this area, of course. We still need to do a lot of work in order to further develop the national consciousness of our people and make it meet the requirements of the current era.

Having a good understanding of what the image, outlook, culture, human qualities, and abilities of our youth are, and relentlessly working on the formation of these qualities is the task of our society, first of all educators, professors, teachers, scientists, all intellectuals and the public. we must recognize it as an urgent issue.

1. Attracting young people to social and individual useful work, providing them with jobs, and in this process, increasing attention to the interest, talent, and interests of young people;
2. To increase the quality of social activity in young people, to increase their leadership qualities in the youth movement;
3. Broad promotion of natural-scientific knowledge while inculcating national values in the minds of young people;
4. Criticism and self-education, strengthening ways of independent thinking;
5. To widely promote the achievements of our past heritage, the achievements of independence literature and art;
6. It is necessary to strengthen education in the spirit of national traditions and customs, and at the same time to organize ideological education based on universal and modern achievements;
7. To increase the potential of young people, to strengthen work related to ensuring their place in life;
8. Efforts to protect young people from foreign and harmful ideas, to build ideological immunity.

So, educating young people in the spirit of national values is not an immediate task, it takes time. The effective use of all available methods, forms, and means of educational work to form an ideological outlook, instill national values into the minds and hearts of young people, plays an important role in the realization of our common goals.
