ANNOTATION

work of youth organizations in our country to support youth and increase their activity in Uzbekistan.

Keywords: agency for Youth Affairs, National Strategy, five initiatives.

From the path of historical development of each state, it is known that the rapid development of the country, the achievement of certain achievements, the prosperity and freedom of the people are closely related to the level of attention given to the education and future of youth in that state. The issue of youth in Uzbekistan is one of the most priority areas of state policy. Uzbekistan is a rapidly growing state, more than half of which are young people.

Youth largely determines not only the present, but also the future of the state. Youth is the power, Strategic and human resources of our country. Our state is confident in the future generation, supports all youth initiatives. The main task of young people is continuous research, self-improvement, spiritual rebirth. The fate of the future country is determined by the children of today. Consequently, the education of strong and intelligent young people becomes a necessity for every society.

The world community has long come to the conclusion that the real engine of progress is not machinery and equipment, technology and economy, but a hard worker who creates everything necessary for the further development of man – civilization. Having invested in the education, culture and health of young people, society invests in its development.

The agency for Youth Affairs, as a specially authorized state body, is authorized to exercise control over the implementation of legislation on State Youth Policy, participate in the Prevention of offenses among young people, submit submissions to the heads of state bodies and organizations to eliminate identified offenses. Legislation on youth policy is under consideration.

In particular, until today, more than 40 legislation on youth, more than 30 international legal acts have been ratified by Parliament.

In addition, the specially authorized state body and its territorial administrations have the right to send requests to state bodies and organizations with a request to provide substantiated explanations on the implementation of regulatory legal acts and programs for the implementation of State Youth Policy.

It is established by law that draft regulatory legal acts directly or indirectly related to the implementation of State Youth Policy are obliged to agree with a specially authorized state body.

The powers of the agency for Youth Affairs and its territorial units in the field of protecting children from information that harms their health are also determined.

The adoption of the law "on amendments to certain legislative acts of the Republic of Uzbekistan in connection with the improvement of the system of working with young people" provides the basis for the legal consolidation of the powers of the Youth Affairs Agency in the field of maintaining State Youth

Policy, prevention of neglect and offenses among young people, protection of children Information that harms their health, as well as the implementation of State Youth Policy

The importance of the role of young people in the development of the state is repeatedly emphasized by the president of the Republic of Uzbekistan Shavkat Mirziyoyev: "we will build new Uzbekistan together with young people. 2020 was a year of radical turning in youth Public Policy. In this regard, the process of education and upbringing in our country is already beginning in kindergarten. At the school and university level, these are the self-governing bodies of the school and students, respectively. In order to improve the work with young people, various state structures aimed at attracting young people to social activities were created: youth parliaments under the Oliy Majlis, Youth Union of Uzbekistan, Youth Affairs Agency, interdepartmental councils on youth issues.

The state program "Youth-Our Future", aimed at ensuring youth employment by encouraging and supporting the implementation of entrepreneurial initiatives, startups, ideas and projects of young people, pays off. These are the brave oglon state awards and future creator medals, as well as the Order of friendship and the Medal of Fame, which is awarded to patriotic and selfless young people who are making a worthy contribution to the prosperity of the motherland in order to effectively work in various fields and encourage young people who are following the example of their peers.

Such work helps the naviron generation to realize the importance of creative movement, although it is full of strength, desire, aspiration and strength not only in old age, but even now. Such organizations solve youth problems, act as intermediaries between the older and younger generation. In the age of the Internet and social networks, hearing the voices of young people is an important issue. Understanding the experiences and perspectives of young people can help guide responses and approaches to protect them. It should be said that in modern conditions, the "measure of youth" should develop in the activities of international organizations. It is necessary to give young people the opportunity to develop and implement comprehensive policies and programs that meet their specific needs, protect their rights and recognize the diversity and challenges they face.

The youth of New Uzbekistan is an active subject of transformation of society and an important resource of modernization, as well as the most valuable human resource for economic growth and ensuring the well-being of generations. Ensuring the legal rights and interests of young people in our country is a priority of state policy and is always in the center of attention: in the next two years alone, three laws on the industry, dozens of presidential decrees, presidential decrees and government decisions were adopted. In particular, the State Prize" brave oglon "and the medal" creator of the future " were established. In Uzbekistan, until 2025, a concept for the development of State Youth Policy and a "road map" for its implementation were adopted. On this basis, great work was done. In particular, under the chairmanship of the Prime Minister, the agency for Youth Affairs and interdepartmental councils for youth issues began their activities.

In the Legislative Chamber of the Oliy Majlis, a commission on youth issues was created, youth parliaments were created under the chambers of the Oliy Majlis. Youth Day was established, in a short time forums and festivals are held, which have a strong place in the life of our society. The state program on the implementation of the national strategy of the Republic of Uzbekistan on human rights and the strategy of actions in five priority areas of development of the Republic of Uzbekistan in 2017-2021 "in the year of support of Youth and strengthening their health". The program "population" is being implemented.

Five important initiatives put forward by the head of state are being brought to life. It defines such tasks as broad involvement of young people in culture, art, physical education and sports, increasing their literacy in Information Technology, promoting reading, and ensuring women's employment. In particular, special attention is paid to the creation of conditions for the most important task – ensuring employment of young people, obtaining a decent income.

President of Uzbekistan Shavkat Mirziyoyev believes that "entrepreneurship, especially small and medium-sized businesses, is our greatest opportunity and resource in this direction." In this regard, the practice of developing and introducing "youth notebooks", which today includes more than 650 thousand unemployed, has been established in our country. The initiatives of the head of state to expand measures to support youth entrepreneurship, to introduce new mechanisms of employment are being implemented and new benefits are being provided for both students and young people, entrepreneurs looking for jobs and starting jobs. In the process of implementing programs and activities in the field of youth policy, civil society institutions, in particular, youth organizations, are actively involved. For example, on the basis of the concept of youth policy of the Council of the Federation of Trade Unions of Uzbekistan, structures for working with youth are established under trade union organizations. These structures are consistently conducting their activities.

Uzbekistan has a huge potential for rapid development, it is necessary to fully realize its potential, characteristic of young people and the main members of the society, which make up more than half of the population of our country. Development of national youth strategies; adoption of a national action plan to ensure the employment of the younger generation; development of national strategies for the development of digital skills among young people is necessary.

The fact that young people are the main participant in the nationwide movement "kindness and support", organized in our country in such a difficult modern period, when the whole world is covered by the coronavirus pandemic, is a sign of Youth Mobility, which, in turn, has a high value due to the current situation.

In conclusion, young people who are active, persistent in every business, who make good use of every time, will certainly be able to find their place in the future, and for this, all the conditions in our country are being created by our leader and government.
