Abstract

This article analyzes the fact that educating the youth of our country in the spirit of our national values is one of the most relevant and important aspects of today's globalization period.

Keywords: value, spirituality, youth, responsibility, human.

Introduction

It is extremely important to rely on the legacy of our ancestors, especially in the spirit of national and universal values, to educate the worthy successors of our future - our youth. President Sh.M. Mirziyoyev in his book "We will continue our path of national development and raise it to a new level" states that "We need to mobilize all our strength and capabilities to educate our youth in the spirit of national and universal values"[1]. After all, national and universal values are a social phenomenon that has passed the test of life and serves the development of mankind.

The concept of values has been defined differently by philosophers. One of the famous scientists of our republic E. Yusupov, J. Tulenov, Z. Gafurov and Russian philosophers A.G. Zdrovomyslov and G. Drabnitsky also expressed his opinion in his treatise[2].

Any social, material, spiritual thing or phenomenon formed in the process of society's development is called a value not only because it gained positive significance in the past, but also because it is capable of creating new opportunities for the future. In other words, values are a necessary product of society and spiritual development.

Value is a set of natural and social benefits that serve the interests and goals of the nation, people and social groups, which are important for people and humanity, and are therefore valued and appreciated by them [3].

Values reflect the criteria and methods of evaluation of moral rules and standards, ideas and goals: They are in the form of moral concepts such as duty, conscience, honor, responsibility, qualities such as honesty, purity, mutual help and fairness, love, hard work, patriotism. appears[4]. In our opinion, value is the material and spiritual wealth created by people in the process of historical development, which discovers importance for people and humanity, satisfies their interests and needs: improvement, stimulating the creative growth of the next generation.

Values related to ethnic aspects and characteristics that are important for the nation are national values. There is no nation in the world without its own values. National value is manifested in an inextricable connection with the history, way of life, spirituality and culture of the nation [5]. National values are important and serious aspects, features, material and spiritual wealth for the nation [6]. In raising the spirituality of our people, our national traditions and exemplary values such as kindness, glorification of man, peaceful and peaceful life, appreciation of friendship and harmony, solving various problems together are becoming more and more important. National values help to understand our way of life, our spiritual image, our traditions and our identity, and in this regard, they unite the people as a people,

a nation as a nation. After all, people who know their values and worth do not turn into a crowd; feels that he is capable of great things, preserves independence, worries and fights for the perfection of his children. It is for this reason that national values are an important moral factor that serves to renew society.

"It is clear to all of you that today, unfair competition, contradictions and conflicts are becoming more and more acute on the world scale.

Threats such as religious extremism, terrorism, drugs, human trafficking, illegal migration, and "mass culture" are increasing and are undermining the beliefs and family values that mankind has followed for centuries[7]" it is appropriate to share considerations about what to pay attention to in the prevention of terrorism. For this, it is necessary and necessary to follow the following: To protect young people from threats and attacks such as violence, terrorism, extremism, and to promote a healthy lifestyle; To increase the legal culture of the population, especially young people, and to form their awareness of the negative consequences of terrorism; To launch promotion and agitation work in cooperation with the chairpersons of the self-governing bodies that make up the civil society and their advisers on the issues of religious enlightenment and spiritual moral education.

On February 2, 1998, in the presence of the Republican Women's Committee, the establishment of the scientific-practical center "Family" was a big step in the direction of harmonizing national traditions related to the family with universal values, increasing the legal literacy of family members.

Man is the highest value, therefore, one of the values characteristic of our nation is childhood. Giving birth to many children in the family and bringing them to maturity is of great social importance. Article 66 of the Constitution of the Republic of Uzbekistan states that "Adult, able-bodied children are obliged to take care of their parents[8]". It is gratifying to note that there is no such article in the Constitution of any foreign country.

It should be said that our Constitution is imbued not only with democratic principles, but also with the spirit of national and universal values. It should be said that our Constitution is imbued not only with democratic principles, but also with the spirit of national and universal values. If we consider the family as the main treasure of our national values, the neighborhood and the school are the paintings that raise this treasure to the level of a real work of art. In short, the contribution of a great institution called a school to the development of a person and society is incomparable. The wise saying "neighborhood is both father and mother" is true and not for nothing. Because, when talking about neighborhood, it is natural that many people remember and mention such deep meaning words.

President Sh.M. The time has come to understand the true meaning of the proverb "Seven neighborhoods for one child, both father and mother," as Mirziyoev said. The time has come to understand and live on this basis [9]. The spiritual wealth of any nation consists of a combination of national and universal values. Therefore, attention should be paid to national values. Because, as attention to national values decreases, this in turn has a negative effect on the enrichment of universal values.

Today, there are many young people in our country who appreciate our values and treat noble traditions as an important factor in their life goals. But we still cannot deny that there are young people who do not understand the place of national values in their lives and perspectives, or who see themselves without it and are more indifferent to our national culture.

We are all witnesses - today the world is changing at an unprecedented pace. Along with many positive processes in our social life, spiritual threats aimed at capturing the hearts and minds of the young generation are becoming more and more dangerous.

It is difficult to imagine social life without values recognized by society, it is impossible to live without them. However, destructive ideas against our values, i.e.: "personal freedom" against high responsibility to the family and society: "individualism" against collectivism, neighborhood, "egocentrism" against parents, respect for relatives, kindness, "crowd" "against culture" by preserving national and universal values, it is necessary to put an ideological barrier in the mind against evils that threaten the stability of our society.

In conveying the meaning and value of today's free and free life to the minds and hearts of young people, parents and teachers should be responsible first of all. After all, today, we should not look indifferently and indifferently at what values our young people are striving for, what dreams and thoughts they are living with. As parents, mentors, and leaders, we have no right to observe this process from the sidelines."
